## UNIT LEARNING OUTCOMES (ULO)

CRICOS Provider Code: 03335G | CRICOS Course (BDS) Code: 097290E

COF	CORE UNITS	
1.	MATHEMATICS FOR DATA SCIENTISTS	
	Recognise the basic concepts, problems and applications of mathematics in data science	
	Develop inquiry and quantitative abilities to solve mathematical problems	
	Evaluate mathematical problems, identify and innovate solutions	
	Demonstrate teamwork skills by working in a group project to arrive at mathematical solutions for problems assigned	
	Effectively express the mathematical solutions through writing and making presentations	
2.	INTRODUCTION TO STATISTICS AND PROBABILITY	
	Examine mathematical statistics and provide individual solution using empirical and quantitative skill to problems	
	Develop quantitative and computing skills and apply to specific real-life cases and problems	
	Analyse a problem situation, choose among various mathematical methods, and develop full and cogent solutions	
	Demonstrate teamwork skills by working in a group project	
	Write and present solutions with appropriate justification and reasoning	
	Develop realistic solutions grounded with analytical competency to real life problems	
3.	INTRODUCTION TO COMPUTER PROGRAMMING	
	Recognise the basic concepts in computer programming and their applications to data science discipline	
	Demonstrate skills to write, debug and test computer programs	
	Explain the process of software development and propose changes to improve the final software product	
4.	INTRODUCTION TO DATABASES	
	Demonstrate concepts in database systems and their application in business contexts	
	Develop inquiry and quantitative abilities to Implement SQL	
	Construct a relational database design and data modelling using the Entity-Relationship (ER) model	
	Demonstrate communications skills, orally and in writing, in presenting built databases	
5.	LINEAR ALGEBRA	
	Recognise the basic concepts and problems of linear algebra	
	Demonstrate quantitative abilities to solve data science	
	Solve systems of linear differential equations, and consider possible applications in data science	
	Prepare oral and written mathematical presentations	

6.	CALCULUS
	Demonstrate an essential knowledge of calculus
	Use quantitative and computational skills to solve calculus problems
	Categorise and solve different types of calculus problems
	Demonstrate teamwork skills by working in a group project
7.	INTRODUCTION TO DATA SCIENCE
	Examine the basic concepts of data science and applications
	Use quantitative abilities to solve data science problems
	Evaluate and dissect data in different ways
	Demonstrate teamwork skills to formulate solutions for mathematical problems
	Interpret a data set and present findings in oral and written form
8.	STATISTICAL DATA ANALYSIS
	Classify and interpret statistical data using quantitative techniques
	Apply quantitative and statistical analysis skills to problems
	Evaluate and manage different types of data
	Interpret a data set and present findings in oral and written form
	Assemble and communicate data in an ethical, transparent, and orally responsible manner
9.	ADVANCED CALCULUS
	Demonstrate knowledge of advanced calculus
	Use quantitative and computational skills to solve advanced calculus problems
	Contrast the various types of differential equations
	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned
	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations
10.	Contrast the various types of differential equations         Demonstrate teamwork skills by working in a project to solve the problem assigned         Prepare mathematical solutions and defend them in written and oral presentations         ALGORITHMS AND DATA STRUCTURES
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations ALGORITHMS AND DATA STRUCTURES Identify the basic data structures and algorithms
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations ALGORITHMS AND DATA STRUCTURES Identify the basic data structures and algorithms Analyse algorithms and data structures to arrive at appropriate solutions
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations ALGORITHMS AND DATA STRUCTURES Identify the basic data structures and algorithms Analyse algorithms and data structures to arrive at appropriate solutions Evaluate the object-oriented paradigm as the framework of choice for the design of data structures
10.	Contrast the various types of differential equations         Demonstrate teamwork skills by working in a project to solve the problem assigned         Prepare mathematical solutions and defend them in written and oral presentations         ALGORITHMS AND DATA STRUCTURES         Identify the basic data structures and algorithms         Analyse algorithms and data structures to arrive at appropriate solutions         Evaluate the object-oriented paradigm as the framework of choice for the design of data structures         Apply Algorithm Analysis to real-life business problems
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations <b>ALGORITHMS AND DATA STRUCTURES</b> Identify the basic data structures and algorithms Analyse algorithms and data structures to arrive at appropriate solutions Evaluate the object-oriented paradigm as the framework of choice for the design of data structures Apply Algorithm Analysis to real-life business problems Demonstrate Algorithm Analysis to a diverse audience
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations ALGORITHMS AND DATA STRUCTURES Identify the basic data structures and algorithms Analyse algorithms and data structures to arrive at appropriate solutions Evaluate the object-oriented paradigm as the framework of choice for the design of data structures Apply Algorithm Analysis to real-life business problems Demonstrate Algorithm Analysis to a diverse audience DATA INTEGRATION AND WAREHOUSING
10.	Contrast the various types of differential equationsDemonstrate teamwork skills by working in a project to solve the problem assignedPrepare mathematical solutions and defend them in written and oral presentationsALGORITHMS AND DATA STRUCTURESIdentify the basic data structures and algorithmsAnalyse algorithms and data structures to arrive at appropriate solutionsEvaluate the object-oriented paradigm as the framework of choice for the design of data structuresApply Algorithm Analysis to real-life business problemsDemonstrate Algorithm Analysis to a diverse audienceDATA INTEGRATION AND WAREHOUSINGIdentify the problem of data inconsistency in operation systems
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations ALGORITHMS AND DATA STRUCTURES Identify the basic data structures and algorithms Analyse algorithms and data structures to arrive at appropriate solutions Evaluate the object-oriented paradigm as the framework of choice for the design of data structures Apply Algorithm Analysis to real-life business problems Demonstrate Algorithm Analysis to a diverse audience DATA INTEGRATION AND WAREHOUSING Identify the problem of data inconsistency in operation systems Use BI tools to build a data warehouse
10.	Contrast the various types of differential equations Demonstrate teamwork skills by working in a project to solve the problem assigned Prepare mathematical solutions and defend them in written and oral presentations ALGORITHMS AND DATA STRUCTURES Identify the basic data structures and algorithms Analyse algorithms and data structures to arrive at appropriate solutions Evaluate the object-oriented paradigm as the framework of choice for the design of data structures Apply Algorithm Analysis to real-life business problems Demonstrate Algorithm Analysis to a diverse audience DATA INTEGRATION AND WAREHOUSING Identify the problem of data inconsistency in operation systems Use BI tools to build a data warehouse Evaluate data warehouse, data mart, and cube concepts

12.	VISUAL ANALYTICS
	Demonstrate the basic concepts and problems of visual analytics
	Evaluate the data assigned using visual thinking and visual analytics techniques
	Develop visual analytics applications
13.	ADVANCED LINEAR ALGEBRA AND APPLICATIONS
	Demonstrate knowledge of the basic concepts and problems of matrix algebra
	Apply matrix methods to data science problems
	Differentiate different sorts of quantitative techniques for specific types of problems
14.	PROGRAMMING FOR ANALYTICS
	Recognise the concepts of programming and R & Python languages for data analysis
	Illustrate the basics of R, different plots, statistics functions, and packages in R
	Use Python as a visualisation tool and develop data analysis models
	Explain data analyses and results to a diverse audience
15.	CONSUMER BEHAVIOUR AND MARKETING RESEARCH
	Identify the basic concepts and problems of consumer behaviour and marketing research
	Design and develop market research plans
	Predict and assess trends in consumer behaviour to the marketing of an actual product or service
	Collaborate in a team to create a market research plan
	Defend a research plan to multiple stakeholders
16.	MACHINE LEARNING
	Recognise the basic theory and regression models used in machine learning
	Apply classification techniques, clustering techniques, association rules and partitioning methods on a dataset
	Prepare machine learning and data mining projects
	Demonstrate methods and solutions to various audiences
	Design ethical data solutions to real life business problems
17.	SIMULATION MODELLING
	Recognise concepts in simulation modelling
	Demonstrate effective data-driven decision making
	Develop Monte Carlo simulation in R
	Collaborate in teams to undertake a simulation modelling project
	Prepare simulation results relating to real business problems

18.	DATA MINING
	Identify data warehouse and data analysis techniques
	Manage techniques for analysing data and their application to strategic decision making
	Use BI Studio/tools for business applications
	Design socially and ethically responsible data solutions
19.	OBJECT RELATIONAL AND NOSQL DATABASES
	Identify the basic concepts and problems of object relational and NoSQL databases
	Recognise object-relational and NoSQL databases and evaluate their use for the management of complex data types
	Assess the requirements of modern database environments that involve complex data types
	Collaborate in teams to undertake a database project
	Demonstrate the design and implementation of non-relational database to a diverse audience
20.	SOCIAL WEB ANALYTICS
	Demonstrate the basic concepts, applications, and problems of web and social networks
	Analyse website traffic and apply social media strategies
	Evaluate the limitations of web-based data and appraise large sensor and network datasets
	Collaborate in a team web analytics project
	Demonstrate web mining solutions to a diverse audience
	Apply ethical principles to real-life business problems
21.	ADVANCED ANALYTICS
	Review stream, sensor, and spatio-temporal analyses
	Evaluate data using sensor analytics techniques
	Use sensor and spatio-temporal analyses for decision making
	Collaborate in teams to use advanced analytics
	Demonstrate spatio-temporal analyses to a diverse audience
22.	BIG DATA PROCESSING TECHNIQUES AND PLATFORMS
	Recognise big data processing techniques and platforms
	Evaluate data using big data Hadoop technique
	Develop Hadoop algorithms to mine big data
	Illustrate big data analysis to a diverse audience and defend ethical approaches to data analysis of real business problems

FOUNDATION SKILLS AND EMPLOYABILITY SKILLS UNITS	
23.	FOUNDATION SKILLS 1: PERSONAL & CAREER FOUNDATIONS
	Explain key concepts associated with personal values and goals, career aspirations, employment trends, and individual pathway opportunities/plans/strategies
	Identify personal strengths and note personal and work trajectories
	Identify and analyse labour and employment trends, and seek support mechanics for empowerment and value-add to decision making
	Demonstrate teamwork skills in group task and activities; appreciate the value of teams
	Appreciate the context and situations around learning, being and becoming
	Develop realistic solutions grounded with analytical and critical competencies to real-life problems
24.	FOUNDATION SKILLS 2: ETHICS AND MORAL REASONING
	Explain basic concepts in philosophy and describe terminologies associated with ethics, moral reasoning and virtues
	Understand and engage in debates on ethics and moral reasoning
	Use the skills and processes of philosophical discourse to address critical incidents, and conduct independent inquiry and research
	Demonstrate teamwork skills in group task and activities; appreciate the value of teams and its pertinence in arguments and debates (group consensus)
	Appreciate ethics and moral reasoning transcends culture and society; analyse and critically evaluate arguments and points of view
	Understand the role of philosophy, ethics moral values (and virtues) in everyday life
25.	EMPLOYABILITY AND PRACTITIONER SKILLS SERIES 1: EMOTIONAL INTELLIGENCE
	Demonstrate an understanding of personality types and attributes of emotional intelligence and empathy
	Exhibit the skills, knowledge, and understanding gained in order to increase employability and possess the essential qualifications sought in the corporate world
	Display self-awareness, emotional intelligence, and empathy
	Select and use appropriate interpersonal skills and communication tools effectively for communicating in different business situations
	Plan, organise, and participate in group meetings effectively
26.	EMPLOYABILITY AND PRACTITIONER SKILLS SERIES 2: LEADERSHIP, TEAMWORK, GLOBAL DEXTERITY
	Demonstrate an understanding of team dynamics, personality traits, and different leadership styles
	Discuss the impact of various socio-cultural factors in effective leadership in a globalised world
	Analyse the relationship between motivation, type of followers, culture code, and team performance
	Engage in analytical discussions and present recommendations and possible solutions in written reports and verbal presentations
	Plan, coordinate and work independently and in teams, to meet deadlines, delivery styles and specified quality standards

27.	EMPLOYABILITY AND PRACTITIONER SKILLS SERIES 3: COMMUNICATING EFFECTIVELY
	Display a good understanding of relevant factors pertinent to negotiation, negotiation styles, and conflict resolution in cross cultural settings
	Research a real cross-cultural business transaction from the aspects of negotiation, parties involved, motivations, and the nature of the outcome
	Critically analyse personal negotiation and selling styles and devise ways to enhance these via listening skills, empathy, inter- personal relationships, cross-cultural dexterity, and effective communication
	Engage in analytical discussions and present recommendations and possible solutions in written reports and/or verbal presentations
	Work in teams and independently to meet deadlines, delivery styles, and specified quality standards
28.	EMPLOYABILITY AND PRACTITIONER SKILLS SERIES 4: INNOVATION, CREATIVITY AND AGILITY
	Discuss the concepts, tools, and frameworks for innovation, creativity, and agility
	Adopt innovative creative and strategies while addressing ambiguity in the business environment
	Assess own creativity, innovation style and ability to cope with ambiguity and accordingly prepare a personalised plan/road map to handle future projects that require strategic thinking
	Engage in analytical discussions and present recommendations and possible solutions in written reports and/or verbal presentations
	Work in teams and independently to meet deadlines, delivery styles, and specified quality standards
	Apply strategic thinking using appropriate problem solving, innovation and creativity tools and frameworks to provide a pitch for a new business strategy

## CAPSTONE PROJECTS 29. DATA SCIENCE CAPSTONE PROJECT I Illustrate the concepts and problems of data science and its applications to various domains Demonstrate inquiry and quantitative skills to solve data science problems Formulate a project management plan that utilises data science techniques Design written, visual, and oral media to address stakeholder's objectives

	Develop solutions to real-life business problems
30.	DATA SCIENCE CAPSTONE PROJECT II
	Illustrate the concepts and problems of data science and its applications to various domains
	Demonstrate inquiry and quantitative skills to solve data science problems
	Devise a technical solution to a significant problem using appropriate tools and techniques
	Collaborate in a team to achieve project goals to the satisfaction of stakeholders
	Present solutions that meets stakeholder's objectives using various media formats
	Develop analytical solutions to real-life business problems
